Phone: (501) 304-3466
Email: justinnickovtime@gmail.com
Portfolio: justinsandage.com
Github: github.com/justinSandage

Highly ambitious, self-taught full-stack developer with meticulous attention to detail and a rigorous coding regimen. Passionate about new technology and always learning. I'm currently building my first React web app for my portfolio!

KEY SKILLS

- Cross browser compliant front-end code, including HTML5, CSS3, vanilla JS, and jQuery
- Extensive back-end experience using PHP, MySQL, and MSSQL
- Currently branching out and learning React and Sass
- HTML email blasts, .psd to HTML conversion, MailChimp, and ConstantContact
- Wordpress and DNN
- Photoshop and gimp
- IIS, tomcat, cPanel, and Plesk
- Progressive enhancement, accessibility, and SEO
- Hungry to learn, develop, and grow

EMPLOYMENT HISTORY

STIHL Southwest, Inc. - Malvern, AR
Web Developer - Full Time

August 2010 - Present

- Added a PHP form to prompt dealers to update data upon site login (names of employees, phone, email, etc.). Built a script to first check if they've updated data in the last 6 months before prompting. Then used Windows Task Scheduler to dump a nightly file from the db that's auto imported into our business CRM system.
- Created an SSO script to allow 1 login access between the company's main website and eCommerce site.
- Built the Bid Assist Web portal (HTML, CSS, jQuery, PHP, and MySQL). This is a program that allows our dealers to receive rebates and credits based on the discount they provide to their customers. Dealers are able to enter new claims, save and resume claims they're still working on, view the status of their claims, as well as see a history of all the claims they've submitted. Calculations done on claims are performed automatically. Bid Assist admins are able to approve/deny claims via the same portal. A bi-weekly file is automatically dumped and then auto-imported into our SX.e business system. Another file is auto-generated monthly that we send to STIHL, Inc. Dealers have access to the portal at the company's main website, via a tab at the top that opens an iframe and SSO script to allow for a seamless integration.
- Built the SSW Selector App for mobile devices to allow dealership sales teams quick access to important STIHL product information (my first PHP app!).
- Rebuilt the company's 50th anniversary Wordpress site into a traditional standalone site (the anniversary was over, but they still wanted to keep the site up without having to continue paying hosting fees).
- Built a script to hide Admin and Host features for help-desk personnel.
- Highly customized the DNN skin on the company's website to be responsive and more modern looking.
- HTML email blasts and .psd file to HTML email conversion.
- Ongoing maintenance and improvements to the sites and applications noted above.

Paws and Claws Animal Rescue - Malvern, AR
Web Developer

September 2015

- Built a simple standalone website to serve as a basic information page for the animal rescue organization.

EDUCATION & CERTIFICATES

High School Diploma - 2006
Comptia A+, Comptia Network+, Microsoft 70-646, Microsoft 70-642
